# BLOCKCHAIN

A blockchain is a decentralized, digital ledger that records all transactions across a network of computers. It is a chain of blocks that contains information and once a block is added to the chain it cannot be altered. Each block contains a collection of transactions and a unique code called a "hash" that links it to the previous block, creating an unbreakable chain of blocks, hence the name "blockchain."

Blockchains are often used to create a digital currency, such as Bitcoin, but they can also be used for other purposes such as tracking supply chain information, digital identity verification and voting systems.

One of the key features of a blockchain is that it is decentralized, meaning that it is not controlled by any single entity, making it resistant to tampering or manipulation. Instead, it is maintained by a network of computers, called "nodes," that work together to ensure the integrity of the blockchain.

# WEB3.0

Web 3.0 refers to the next evolution of the internet, characterized by the use of advanced technologies such as blockchain, artificial intelligence and the Internet of Things. Unlike Web 2.0, which focused on user-generated content and social media, Web 3.0 is expected to be more decentralized, secure and intelligent.

One of the key features of Web 3.0 is the use of blockchain technology, which allows for decentralized and secure storage of data and information. This means that users will have more control over their personal data and online identities, and will be able to interact with each other and with digital assets in new ways.

Another major aspect of Web 3.0 is the use of artificial intelligence, which will enable the creation of more intelligent and personalized online experiences.

# WHAT IS AN NFT?

NFTs, or non-fungible tokens, are a relatively new development in the world of digital assets. They represent a new way to prove ownership and authenticity of digital items, and have been gaining a lot of attention in the art world and other creative industries.

An NFT is a digital token that is stored on a blockchain, which is a decentralized digital ledger that records all transactions in a secure and transparent way. Unlike cryptocurrencies, which are interchangeable and have a fixed value, NFTs are unique and cannot be exchanged for something of equal value. This makes them ideal for representing one-of-a-kind digital assets such as artwork, videos, music, tweets and other digital items.

Because NFTs are stored on a blockchain, their ownership can be easily verified and tracked. This makes them valuable for creators and artists who want to prove their ownership of a digital artwork and sell it for a high price. Additionally, NFTs can be used for other digital assets such as collectible items and virtual assets in video games.

# HOW DOES NFT WORK?

NFTs, or non-fungible tokens, work by using blockchain technology to prove ownership and authenticity of a unique digital asset. Here is a general overview of the process:

The creator of the NFT, such as an artist or musician, creates a digital asset, such as a digital artwork or a music video.

The digital asset is then "minted" into an NFT by creating a unique digital token that is stored on a blockchain. This process involves creating a smart contract, which is a self-executing contract that contains the rules and conditions of the NFT, including information about the digital asset and the rights associated with it.

The NFT is then available for purchase or auction on a marketplace that specializes in selling NFTs. These marketplaces often use a cryptocurrency such as Ethereum, to facilitate transactions.

When the NFT is sold, the ownership of the digital asset is recorded on the blockchain, proving that the buyer is now the owner of the unique digital asset. The smart contract also records the transaction and any other rights, such as the right to display or reproduce the digital asset, that are associated with the NFT.

The NFT can be stored in a digital wallet and can be re-sold or traded on a secondary market at any time. This is possible because the NFT is recorded on the blockchain, so the ownership and authenticity can be easily verified and tracked.

Overall, NFTs work by using blockchain technology to create a unique digital token that represents ownership of a digital asset. The use of smart contracts and blockchain technology ensures that the ownership can be easily verified and tracked and that the rights associated with the NFT are clearly defined and enforceable.

# HOW TO MINT?

Prepare the digital asset

Create a smart contract

Mint the NFT

Set the price and sell the NFT

Store the NFT

It's important to note that minting an NFT requires some level of technical knowledge, specifically on smart contract and blockchain. Additionally, fees for minting and storing NFTs on the blockchain, such as gas fees, may apply. It's also important to be aware of the legal considerations when minting an NFT, as different countries and regions may have different laws and regulations regarding the creation, sale, and ownership of digital assets.

# HOW TO STORE NFT?

NFTs, or non-fungible tokens, are stored in digital wallets that are designed to hold and manage blockchain-based assets. Here are a few ways to store NFTs:

**Digital Wallet:** A digital wallet is a software application that allows you to store, manage and send digital assets, including NFTs. There are several different types of digital wallets, including web wallets, mobile wallets and hardware wallets. Some popular digital wallets that support NFTs include MetaMask, MyEtherWallet, and Ledger Wallet.

**Marketplaces:** Some marketplaces that sell NFTs also offer a storage solution for the assets. This means that once you purchase an NFT from a marketplace, it will automatically be stored in your account on that marketplace. This can be a convenient option, but it can also have some limitations such as the marketplace could go out of business or have different storage policy.

**Self-Storage:** Some people prefer to store their NFTs on their own devices, like their computer or a hard drive. However, this method can be risky, as it is important to backup the data and store it in a safe place. Additionally, if the computer or hard drive is lost, stolen or damaged, you could lose your NFTs.

# INTRODUCTION

Homosapiens who lived in the past came to the present world and called themselves Transapiens. Now they have adapted to our lives and even become one of us. They also have two separate colonies; East-Sapiens and West-Sapiens. They integrated the things that everyone does in their daily life into their own lives.

An original collection of NFT consisting of 3000 pieces of unique hand drawings in total, aiming to further connect our lives with the Ethereum Blockchain.

# VISION & MISSION

Our vision is to establish a collection of non-fungible tokens (NFTs) that serves as a leading showcase of the boundless potential of this revolutionary digital asset class. We see a future where NFTs are at the forefront of digital ownership, driving innovation and creativity in the digital art and collectibles space.

In addition to being a showcase for creators, our collection will also serve as a hub for education and community engagement, providing the resources and opportunities for anyone to learn about and participate in the NFT economy. We aim to make our collection open and available to all, regardless of their technical knowledge or financial means.

Our ultimate goal is to create a collection that serves as a shining example of the limitless possibilities of NFTs and a driving force for innovation, experimentation, education and community engagement within the industry, promoting the growth and development of the NFT space and inspiring the next generation of digital assets.

To establish a pioneering collection of non-fungible tokens (NFTs) that not only showcases the diversity and potential of this emerging digital asset class, but also serves as a catalyst for innovation and experimentation within the NFT space.

Our mission is to curate a collection of NFTs that represents the most forward-thinking projects and creators, while providing a platform for education and community engagement that empowers individuals to not only understand the potential of NFTs, but also actively shape its future.

Our collection will be designed to be inclusive and accessible, featuring a diverse range of NFTs from creators of all backgrounds, and providing resources and opportunities for individuals to learn about and participate in the NFT economy, regardless of their technical expertise or financial means.

# NFT UTILITY

**Digital ownership:** NFTs allow for the creation of unique digital assets that can be owned and traded. This can provide collectors with the ability to own a piece of digital art or other unique digital assets that can appreciate over time.

**Access to exclusive experiences:** Some NFT collections may provide access to exclusive experiences such as virtual events or meet-and-greets with the creators of the collection.

**Gamification:** NFTs can be used to create game-like experiences, such as virtual worlds or in-game items, which can be highly engaging for collectors and gamers.

**Investment opportunities:** Many NFT collections have the potential to appreciate, which can provide investors with an opportunity to earn a return on their investment.

**Community building:** NFT collections can help to bring people together around a shared interest, which can foster a sense of community and belonging among collectors.

**Interactivity:** NFTs can be used to create interactive digital experiences such as virtual reality, augmented reality and other interactive media.

**Environmental sustainability:** NFTs can be used to create digital assets that represent physical assets such as real estate or carbon offset credits, which can help to promote environmental sustainability.

**Decentralization:** NFTs can be created and traded on decentralized platforms which can provide a level of security and transparency that is not possible with centralized platforms.

**Traceability:** NFTs can be tracked and traced on the blockchain, which can provide transparency and accountability for the ownership, authenticity and provenance of the assets.

**Fractional Ownership:** NFTs can allow for the ownership of a fraction of a digital asset, which can make it more accessible and affordable for a larger group of people.

# TRANSAPIENS WORLD

Welcome to Transapiens World.

Do you know how all these sapiens came out and came into our lives?

Here's a look at when it all started...

# EAST-WEST SAPIENS

The Sapiens who are teleported to two different points of today's world continue their lives by grouping at two different points, although everything is similar except for their haircuts. But they are divided by modern people into West-Sapiens and East-Sapiens.

Subject of curiosity, if sapiens will start to fuse and live together in the future, or will they group more and more, if they continue to live separately, what differences will there be in their lives, we'll see it all decently...

A scientist finally dares to try out the time machine he has invented. But as a result of miscalculations, he teleports himself to 160,000 years ago. That is, to the era where Homosapiens lived. However, in order to return to his own time line, he has to wait for the time machine to be ready to teleport again. The scientist begins to explore the surroundings. During the exploration, he sees a cave and hears voices from inside and he goes inside the cave to find out what these voices are that he hears. When he enters the cave, he sees that a predatory animal is trying to attack Homosapiens. Then he picks up the Homosapiens and begins to move rapidly away from the cave.

# STORY

He hurriedly enters the time machine to teleport with the homosapiens he has rescued and starts the teleportation process. Since he can't set the teleportation setting properly, they are all teleported to different places in today's world. Let's see what happened to these Homosapiens. Have they been able to keep up with today's world or not...

# ROAD MAP

FUNDING DISTRIBUTION	In order to ensure the continuity of the Transapiens NFT Project and to make unique improvements, 15% of the proceeds from the sale of Whitelist and Mint will be invested in marketing, 15% in the Metaverse application, 10% in the application and web 3.0 studies.
SAPIENS BENEFITS	Alpha discord; After the mint, our discord server dedicated to holders will be opened, where events and sweepstakes will be organized for holders. NFT sweepstakes will be held among the people who download and play the tranSapiens slot game. In addition, people who play the game will be given surprise prizes in the game. The opportunity to take part in various projects and events that we will do in the Metaverse World. The opportunity to benefit from Digital Marketing, Amazon E-Commerce, Shopify Dropshipping, Stock Market and NFT consulting services that you will receive from the "DEALN" company exclusive to Transapiens holders with a 50% discount. Transapiens nft holders are offered the chance to have special Transapiens products with discounts of up to 50% on every product that you will buy from many stores owned by the company "DEALN". A chance to own the merch and print on demand products of the Transapiens NFT collection for free with sweepstakes and discounts of up to 50%
METAVVERSE	Through the Metaverse, spaces will be created where Transapiens can do activities together and work on the projects they want. You can visit the gallery that will be opened in the Metaverse World very soon and see the Sapiens and you will also be able to make NFT purchases from there.
SAPIENS MERCH	In the merch section, which will be opened shortly after the Transapiens NFT Collection goes on sale you can have clothes such as t-shirts, sweatshirts, as well as clothes of some Sapiens.
TRANSAPIENS GAME AND APP	The TranSapiens slot game will be released and there will be an opportunity to capture hundreds of prizes in it. The app is still in the development stage and will be brought to you as soon as possible.
EAST AND WEST	Shortly after the collection sale is completed, various tournaments and events will be organized between the East-sapiens and the West-sapiens.
EVENTS	Have the chance to participate in organization and private parties that will be held face-to-face and that only holders can attend.

# ASSOCIATES

We are excited to announce our partnership with **Mawloud D.** and **Adel Kenzai**, the producers of our animated video, which helps us expand our reach and provide new and innovative services to our customers.

We are constantly amazed at your ability to bring your digital illustrations to life, the depth and realism of your work is truly inspiring. We are proud to have worked together with **Anil Tekçam** on this project.

tranSapiens is thrilled to announce a strategic partnership with **DEALN**, a leading consultancy firm, as we collaborate to deliver innovative solutions and drive impactful results for our clients' businesses.

# COMMUNITY & MEDIA

The community and media have had a mixed reaction to NFTs. On one hand, many people in the digital art world have embraced NFTs as a way for artists to monetize their work and for collectors to own one-of-a-kind pieces. NFTs have also been praised for their use of blockchain technology, which allows for secure and transparent tracking of ownership and provenance. However, there are also concerns about the environmental impact of NFTs, as the process of creating and trading them requires significant energy. There are also concerns about the potential for fraud and scams in the NFT market. Furthermore, some critics argue that NFTs are a speculative bubble and that their value is not based on any real underlying value. Overall, the community and media have a range of opinions about NFTs, with some praising their potential and others raising concerns about their impact and sustainability.

## CONCLUSION

In conclusion, NFTs are a revolutionary new way for creators and collectors to monetize and own digital assets. They allow for secure and transparent tracking of ownership and provenance, making them valuable and desirable to own. NFTs are a highly sought after due to their rarity and uniqueness, and they can be bought, sold and traded just like traditional physical collectibles. They have already made a huge impact on the digital art world and are starting to expand to other fields like gaming, virtual real estate and more. As technology continues to advance, NFTs are likely to become even more prevalent and important in the world of digital ownership and monetization.
